
n = 5 paired blocks, not 50 independent requests. Rows show block and frozen execution order (B/L or L/B).
Ratio points: P1–P5 (circle B/L; triangle L/B). Diamond: exp(median log ratio). Gray strip: descriptive 2.5/97.5 percentiles from all 3,125 paired-block resamples; no confidence-coverage or significance claim. Startup probe time is separate.
