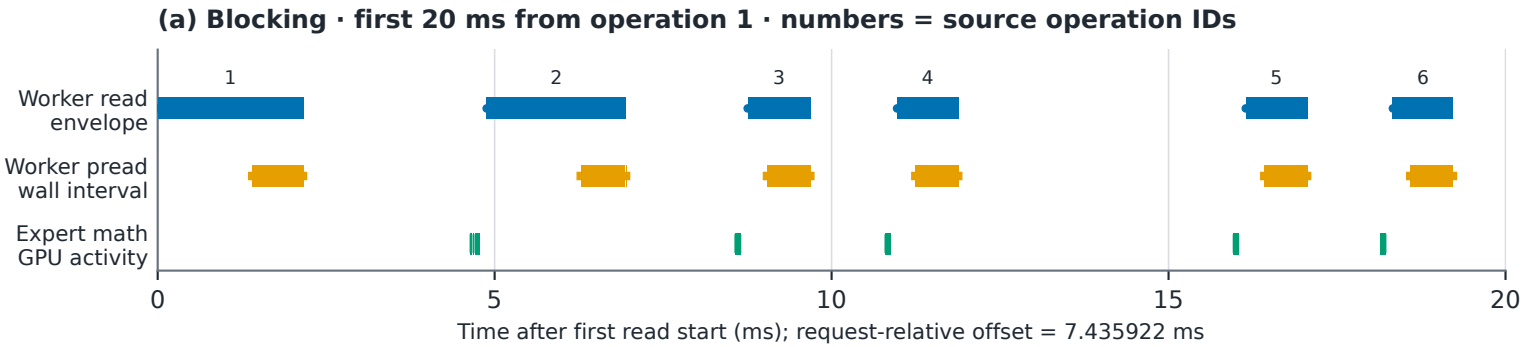
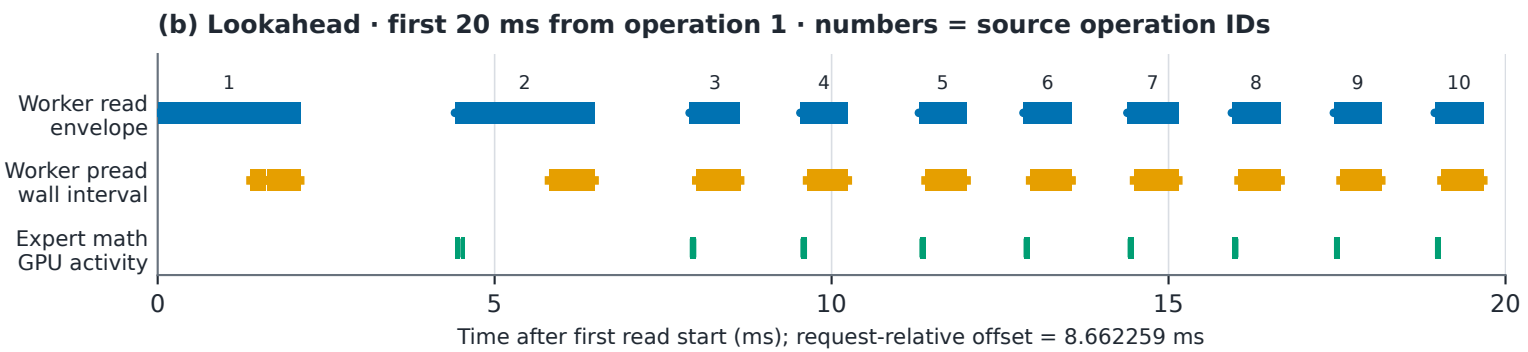
Read–compute overlap: scoped evidence from two fresh captures

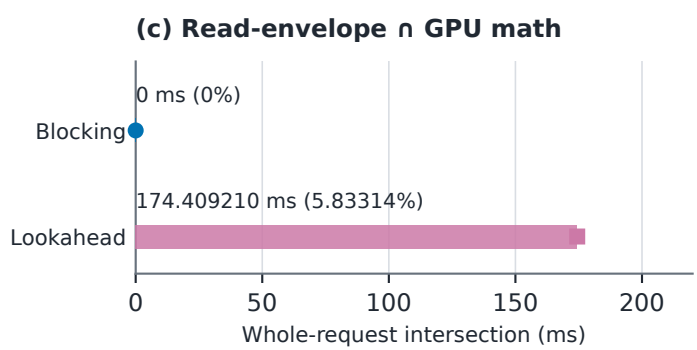
One profiled QA per arm · same serving executable · 3,678 source-verified read operations per arm

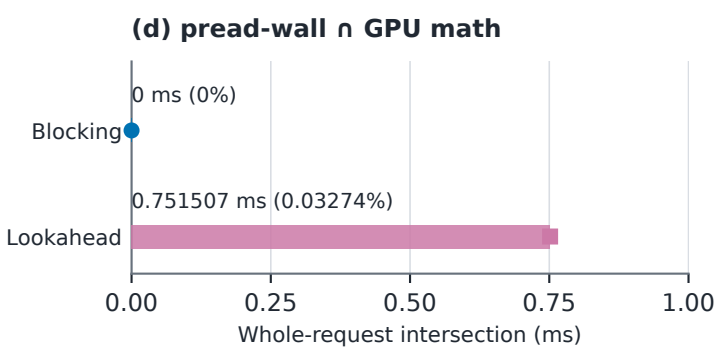
NVTX read envelope · OSRT pread wall · Actual expert GPU kernels

Exact interval widths; symbols mark starts (not minimum durations). Zoom selection does not use overlap.









Percent denominators: union of the corresponding worker intervals, not request length or summed spans.
Read envelope: B 2.982516 s / L 2.989969 s. pread wall: B 2.299020 s / L 2.295077 s.
GPU union: B 0.194741 s / L 0.194217 s; gaps, leading delay, upload and CPU submission are excluded.

SCOPED ACCEPTED · FULL TRACE NOT ACCEPTED · DROPPED-EVENT COUNT UNKNOWN

Three wrapper warnings per arm remain. No active-I/O, physical NAS-service, or ordinary-speed confidence claim.
